## Measure Once - Cut Once

### One person can accurately measure to the millimetre every time

- Robust construction - never misread again
- Circular telescopic tubes for ease of handling
- Fitted with Horizontal and Vertical bubbles
- 3m model measures 0.60 to 3.04m, weight 0.9kg
- 5m model measures 0.91 to 5.01m, weight 1.4kg
- Includes heavy duty carry case

With 14 Glazing trucks in the field everyday taking measurements on job sites throughout Adelaide, we now have less than 0.05% re cuts and revisits to site thanks to the **NEDO Rigid Measuring Tool**. We have a combination of both 3m and 5 m on the trucks. They take a bashing every day and after 11 months they are all still working well and measure to the mm. The boys confidence is very high as they have 100% faith in what they record and then fit on Site. Everyone is happy.

**Rhys Hartley,**  
Commercial Supervisor,  
Hartley Glass (since1957) Wingfield S.A. 5013

To measure diagonally for accurately checking square in a frame, add the two "Screw In" Adapter Points at either end of the NEDO Measuring Tool. Each point is exactly 50mm so simply ADD 100mm/10cm to the observed tape reading in the housing.

Choose from **2 mEssfix** models: 3m order # N-3  
5m order # N-5  
Optional: Internal Corner Adapter Points (2) # N-Points
